FARM EMPLOYMENT PEAK TWO PERCENT BELOW LAST YEAR WAGE RATES CONTINUE MODERATE INCREASE

The 1960 high point in estimated farm employment was reached in the September survey week with a total of 9.1 million workers. This is 2 percent below the high mark of late September 1959 and a new low in the estimates for this time of year. Farm family workers totaled 6.3 million, 2 percent less than last year. Hired workers were estimated at 2.8 million, also 2 percent less than last year.

The September survey week (18-24th) brought generally favorable farming weather across the Nation. Cotton harvest was active in most producing areas and made the usual strong demands for pickers. Machine harvesting continues, however, and promises to reduce total cotton labor. In the cotton States from Texas eastward, the September period showed a gain of a fourth over the low level of a month earlier. The number of all workers showed about the average percentage change from August in the West Central regions as corn and soybean harvests were starting slowly pending advancing maturity. Employment gained slightly more than average in the Mountain region due to varying harvest and livestock work, and in New England, partly influenced by early progress of the Maine potato harvest. Pacific States showed little change with less gain than usual over August levels.

Gains in hired employment over a month earlier were greatest in South Central States where each cotton grower wanted his cotton out of the field quickly. The Texas hired employment estimate of a third a million was the highest monthly total for that State since September 1955.

Farm Wage Levels Reach New October Highs

Farm wage levels for all reported hiring arrangements on October 1 were the highest of record for the fall season. The composite hourly wage, cash only, of \$0.820 per hour was an advance of 2 percent above the previous October high of last year. The index of the composite rate was 613 percent of the 1910-14 average, adjusted for seasonal variation. Increases in rates compared with a year earlier show stronger demand for regular workers paid by the month than for hourly and short-time day labor. Detailed State wage comparisons are shown on pages 6 and 7.

Fall Harvests Make Good Progress

Late season harvest in many sections livened the farm scene during the September survey week, September 18-24, as summer turned to fall. Comments on work progress apply to this period. In the Southeast, cotton harvest was half or more finished in the Carolinas, Georgia, and Florida. Florida vegetables for early fall harvests suffered loss from heavy flooding rains but work moved ahead in general farming areas of the north and western parts of the State. Peanuts in Georgia were 90 percent dug and 75 percent threshed and in South Carolina the harvest was about half completed. Tobacco harvest was well toward completion in North Carolina and Virginia burley tobacco cutting was about half finished. Peanut digging was one-tenth finished. Apple harvest was active with over one-third of the crop picked. Corn tangled and flattened by hurricane winds in coastal strip from eastern North Carolina northward was making slow harvest work. In some fields, mechanical pickers could work one-way only and much hand salvage was required.

Northward through Middle Atlantic States and New England, potato digging was active with notable progress on Long Island, in the Steuben, New York, area and more rapid than usual for early season in Aroostook, Maine. Harvest of apples was general. Cranberry harvest was active in Massachusetts and New Jersey. Lancaster, Pennsylvania, tobacco harvest was about complete.

Kentucky and Tennessee tobacco cutting moved in on the final quarter under good weather. Combining started on soybeans and grain sorghums and much late hay was saved. Alabama cotton opening outran the labor supply as picking reached one-fifth complete and took priority over other work except in commercial peanut areas. Mississippi cotton harvest increased rapidly. Increased machine use promised to prevent or greatly reduce labor shortage through the remainder of the harvest given favorable field conditions.

Arkansas cotton rapidly approached machine picking stage, with hand work active. Rice harvest was about one-fifth completed after some rain delay. Combining early soybeans started. Louisiana harvest reached one-fifth completion for cotton, two-thirds for rice, and one-half for corn. Sugarcane planting was about one-half finished. Oklahoma cotton picking moved slowly pending fuller opening but grain sorghum combining was about one-fourth done, and winter wheat seeding passed two-fifths completion. Texas rice harvest was half finished, cotton one-fourth of State total, and corn picking three-fourths complete. Varied work important in the State's huge expanse included peanut digging in the Cross-Timber area, flax planting in the south and wheat seeding which was four-fifths finished in the High Plains. Sheep and goat shearing neared completion on the Edwards Plateau.

Western stockmen prepared for winter as livestock moved from grazing on high summer ranges to lower ranges or valley bases. Over one-half of Montana livestock had moved from summer ranges. Wyoming lamb and cattle fall marketings were moving steadily. Harvest of dry beans was active in all leading areas in Mountain States and sugar beets almost ready. Fall potato harvest was active in Idaho and leading areas in other States. Seeding winter wheat continued and neared completion in eastern Colorado and New Mexico. Cotton picking increased in Arizona and New Mexico.

Harvest of fruit and other heavy labor use crops continued active in California, Oregon, and Washington. By September 24, most of the California raisins had dried on their trays in

Continued from page 2

sunny vineyards and were out of danger. Table grape picking continued and grapes for the wine crush were moving in large tonnage. Peak harvest of prunes, pears, and peaches was past, and dried fig harvest was about over as was almond harvest. Tomato harvest for processing continued heavy; citrus harvest was light. Cotton picking and harvest of grain sorghum and dried beans expanded slowly. Oregon winter pear harvest was in closing stages in Hood River and Medford districts. Klamath area potato harvest was starting early. Washington's apple harvest was starting slowly on a near-average crop, about a fifth of the U.S. commercial crop. Dry bean harvest had started in the Columbia Basin. Fall grain seeding in most leading wheat areas waited for more moisture.

Farmers in North Central States were combining earliest soybean fields. About one-fourth had been combined in Illinois, a fifth in Missouri, and an eighth in Ohio. Other States were less advanced. Wheat seeding had been slowed in many sections by dry soils but was over-half finished in Kansas, ahead of last year. Nearly three-fourth of Michigan's navy beans had been pulled but few threshed. During the week frost hit hard in northern Michigan and sent more immature corn to the silos. Corn generally was winning its race to maturity but little picking had been done other than hybrid seed corn. In parts of Wisconsin and Minnesota, wet corn fields delayed silage harvest so much that farmers joked about mounting forage choppers on boats.
